

Texas Steel Facility Coated with Custom Blended FX-509 Rust Inhibitive Coating

Overall view of Texas steel plant to be cleaned and coated by SURMAC of San Antonio, Texas.

View of melt shop building in the process of being cleaned. High pressure water is used to remove acid cleaner and dirt from cast wall.

FX-509 Walnut Brown was used to coat existing building. Color was blended by Fox Industries to match new steel panels on recently installed addition.

View of completed project. The addition is located to right with white stripe. Total surface area of the project was approximately 140,000 square feet.
